Auto Repair For Dummies, 2nd Edition (9781119543619) was previously published as Auto Repair For Dummies, 2nd Edition (9780764599026). While this version features a new Dummies cover and design, the content is the same as the prior release and should not be considered a new or updated product. The top-selling auto repair guide--400,000 copies sold--now extensively reorganized and updated Forty-eight percent of U.S. households perform at least some automobile maintenance on their own, with women now accounting for one third of this \$34 billion automotive do-it-yourself market. For new or would-be do-it-yourself mechanics, this illustrated how-to guide has long been a must and now it's even better. A complete reorganization now puts relevant repair and maintenance information directly after each automotive system overview, making it much easier to find hands-on fix-it instructions. Author Deanna Sclar has updated systems and repair information throughout, eliminating discussions of carburetors and adding coverage of hybrid and alternative fuel vehicles. She's also revised schedules for tune-ups and oil changes, included driving tips that can save on maintenance and repair costs, and added new advice on troubleshooting problems and determining when to call in a professional mechanic. For anyone who wants to save money on car repairs and maintenance, this book is the place to start. Deanna Sclar (Long Beach, CA), an acclaimed auto repair

This book offers a comprehensive look at an industry that plays a growing role in motor vehicle production in the United States.

This hearing on "China's Advanced Weapons" will examine a specific set of technologies that China's military is considering or pursuing. In framing the hearing topic as "advanced weapons," the hearing will focus on military technologies at or near the global technological frontier—weapons just now coming into development or not yet developed by any nation. As China has narrowed the technological gap with the United States over decades of investments in military modernization, it has become increasingly important to consider Beijing's efforts to develop new and

potentially revolutionary weapons systems. China has reportedly conducted seven tests of its hypersonic glide vehicle since 2014. It has deployed not one but two antiship ballistic missiles, one of which has a stated range that reaches past the U.S. island of Guam. We hear of longstanding efforts to develop directed energy weapons, and see evidence of China testing a wide range of counterspace systems that could put vulnerable U.S. space assets at risk. China is making major advances in areas such as unmanned systems and artificial intelligence, aided by rapid commercial progress in these sectors. As the new Congress focuses on national security challenges, it is critical to consider China's efforts to develop and field advanced weapons and the implications for the United States. Panel I will examine China's programs for the development of hypersonic and maneuverable re-entry vehicles. Panel II will examine directed energy and electromagnetic weapons development by China. Finally, Panel III will examine developments in China's counterspace, unmanned, and artificial intelligence-enabled systems.

This accessible text provides a lively introduction to the essential skills of creative problem solving. Using extensive case-studies and examples from a range of business situations, it explores various problem-solving theories and techniques, illustrating how these can be used to solve a range of management problems. Thoroughly revised and redesigned, this new edition retains the accessible and
